

EQUIPMENT FACILITATION

Ultrasound Equipment

When it comes to equipment purchases, it is important to have professionals who specialize in ultrasound equipment assist you by doing their research regarding technology, pricing, support and service, to name just a few, and what unit is best overall for your clinical setting. The SSG Team has done just that. Steven Morris, Director of Strategic Partnerships, is in place to work with you and your team as you research, select and invest in an imaging system to be used in your life-affirming setting.

At *Sparrow Solutions Group*, we offer a support service called Equipment Facilitation which is a *complimentary service* focused on providing the tools that leaders in the Pregnancy Medical Clinic need to make the most informed decision on their ultrasound purchase, allowing you to do what you are uniquely equipped to do - ***reach your community for life.***

As the *Equipment Facilitator*, Steven Morris will assist you in reviewing the information you gather and provide tools that can help you determine which unit is the best fit for your center. Some of the steps he takes to assist you are:

- ✓ Review options
- ✓ Outline “value adds”
- ✓ Provide impartial facts to assist with decision making
- ✓ List strengths and weaknesses of equipment companies and products
- ✓ Help facilitate order placement and installation details

While SSG research has found a number of select manufacturers to be optimally suited for the PMC market, Steven is knowledgeable and approachable about many equipment companies and products and is available to answer your questions.
